

Your patients don't care if your internet is having issues. Eliminate downtime and stay connected with LTE cellular backup internet for your entire pharmacy network.

STAY ONLINE

When your primary internet connection fails your pharmacy is in downtime. You cannot process insurance claims, run credit cards or search the internet. With a 4G/5G LTE backup your internet downtime can be eliminated by using a cellular signal to power your entire network.

4G/5G technology isn't just for mobile phones anymore. For years larger enterprises have been using cellular services as a backup internet option. Now that the price has come down substantially for cellular internet many small and medium sized businesses are using this service to keep their business online during outages.

Give your pharmacy the edge over your competition and stay online when your competition is offline.

F.A.Q.

- 1** Q. My pharmacy is in a rural area with slow internet, will this help me?
A. Yes, this backup solution can be utilized almost anywhere in the USA.
- 2** Q. How much will this cost me?
A. Service is \$79.95/mo with 1GB of data per month.
- 3** Q. Is this fast internet?
A. Average speed is 20Mbps download speed and 10Mbps upload.
- 4** Q. Will this work with my router?
A. Yes this can work as a secondary WAN connection or simply replace your primary internet modem when it is in downtime.
- 5** Q. Will this provide internet to my entire pharmacy network?
A. Yes, this device provides internet to your entire pharmacy.
- 6** Q. What cellular providers does the failover use?
A. Usually the strongest provider in the area.
- 7** Q. Why does my pharmacy need this?
A. The answer is obvious. Your pharmacy simply can't afford to be offline.

HOW IT WORKS

Leverage the local cell towers to keep your business online

Cellular backup is designed to provide a backup internet for when your pharmacies primary internet goes down. The device works with local cell towers to bring cellular internet service to your pharmacy, eliminating downtime.

The device comes pre-configured and makes installation simple and quick; just place the device in your building near your router and give us a call, setup usually takes 20 minutes. If your primary internet goes down the cellular device will automatically kick on and alert you via e-mail that you are on your wireless backup.

The device allows you to resume your workflow, continue processing customer transactions and accessing other critical business applications.

PRICING

Pharmacy downtime can be expensive, but it doesn't have to be

Service is \$79.95/mo with 1GB data for a 1 year term. Worried about data usage? Most pharmacies can use very little data if they are aware they are using their backup internet (device notifies you when using data). Limiting listening to music or videos and only allowing pharmacy related applications will help keep data usage low while on the backup internet solution. If you do go over your monthly limit each GB is only \$20. A typical pharmacy will never go over 1GB of data per month when used as a backup service.
